**Vigilant Technology Receives Lenel Factory Certification
Under Lenel's OpenAccess Alliance Program**

*Vigilant's NetVR™ recording server software interfaces with the Lenel® OnGuard®
access control security system*

Hod Hasharon, Israel, March 18, 2015— Vigilant Technology, a BATM Company and provider of IP video surveillance technology and security solutions, today announced that it has joined the Lenel OpenAccess Alliance Program (OAAP) and received Lenel factory certification for its NetVR™ recording server software platform. The interface enables customers using the Lenel OnGuard system seamless access to Vigilant's video surveillance data through a unified user interface.

"Vigilant Technology has completed required factory testing at Lenel to validate the functionality of its Vigilant NetVR Recording Software interface to Lenel's OnGuard access control and security management system. The platform interface creates a scalable enterprise solution to enable users to efficiently monitor and review live and recorded video within the OnGuard system," said Gidon Lissai, director, strategic alliances, Lenel. "We look forward to their continued involvement in the Lenel OpenAccess Alliance Program."

Customers using Vigilant NetVR recording software or NetVR preloaded Hybrid Series are able to achieve, via the OnGuard interface, live video display that includes controlling Pan Tilt Zoom (PTZ) cameras, alarms of video motion detection (VMD), camera tampering and indication of lost analog video signals within OnGuard's alarm monitoring application. In addition, operators investigating can view video playback from any camera recorded on the Vigilant recording server.

"Vigilant continues investing in R&D efforts. The Lenel OnGuard access control

system certification enables Vigilant to provide users with an open enterprise architecture that offers robust video recording for both IP and Analog video surveillance," said Ohad Kleinman, CEO, Vigilant Technology.

Kleinman continued, "Being able to monitor events, control cameras as well as access control devices through the OnGuard application means that security managers have a more complete view of their facility to improve response to events, protect their existing infrastructure and maximize Return on Investment (ROI)."

NetVR recording software is the core of Vigilant's unique video surveillance solution, featuring flexible, scalable and open platform designed with "no single point of failure" architecture.

NetVR software, together with Vigilant's NetView Video Management Software, empower authorized security personnel with maximum flexibility and freedom – enabling simultaneous access, control and viewing of live or playback video from any IP or analog camera, fixed or PTZ - regardless of user location or client device.

About Vigilant Technology
Vigilant is a pioneering developer and manufacturer of intelligent video recording and surveillance solutions for enterprise-grade, mission critical applications focused on adding value to the video that is captured by the customer's CCTV network. Vigilant's high frame rate solutions enable customers to break free from ineffective time-lapse recording solutions and enable demanding environments to gain maximum benefit from today's digital video recording technology. Based in Tel Aviv, Israel, Vigilant is a wholly owned subsidiary of BATM Advanced Communications (London Stock Exchange BVC).
